A vertical pole of height  $h$  casts a shadow of length  $l$  when the Sun is at an angle  $\theta$  above the horizon.

Which of the following expresses the shadow length  $l$  in terms of  $h$  and  $\theta$ ?

Solution

Two towers are separated by a horizontal distance  $D$ . From the top of the first tower (height  $h_1$ ), the angle of depression to the top of the second tower (height  $h_2$ ) is  $\theta$ .

Which relation correctly gives the horizontal separation  $D$  in terms of  $h_1$ ,  $h_2$ ,  $\theta$ ?

1  $D = \frac{h_1 + h_2}{\tan \theta}$

2  $D = \frac{h_1 - h_2}{\tan \theta}$  ✓

3  $D = \frac{h_2 - h_1}{\tan \theta}$  ✗

4  $D = \tan \theta \cdot (h_1 + h_2)$

$$\tan \theta = \frac{h_1 - h_2}{D}$$

$$D = \frac{h_1 - h_2}{\tan \theta}$$
